

## Formulation of Multiple Purpose Multiple Objective Water Resources Projects

**Status:**

In Progress

**IWR Contact:**

Darrell Nolton ([Darrell.G.Nolton@usace.army.mil](mailto:Darrell.G.Nolton@usace.army.mil))

**Purpose:**

These activities will explore, document, and test flexible and effective procedures for formulating multiple purpose water resource projects under current Corps authorities and guidance. Watershed studies will be included. Efforts will focus on the plan formulation process itself, rather than on the measurement and evaluation of effects. Development of innovative alternatives and the application of the full range of Corps programs and authorities will be emphasized, as will the role of partnerships with other agencies and organizations. Trade-Off Analysis and Multi-Criteria Decision-Making are at the core of flexible and effective procedures for formulating multiple purpose water resource projects. Furthermore, displaying the outputs of the formulation efforts is critical to success.
